

# Informe orquestador — Azul fiel + RC → preset Mooer único

Generado: 2026-07-31 11:25 UTC

Azul variant: faithful (CURVA\_COPIA\_OPERATIVA V22)

Idea clave: NO son dos EQs aparte.

Cada preset Mooer emula la MEZCLA:

$$\text{target} = \text{Azul}(\text{faithful}) + \text{gain\_Azul} + \text{RC}(\text{setup})$$

Así el RC 'nuevo' ya lleva el Azul (y su ganancia) adentro.

Orden del informe:

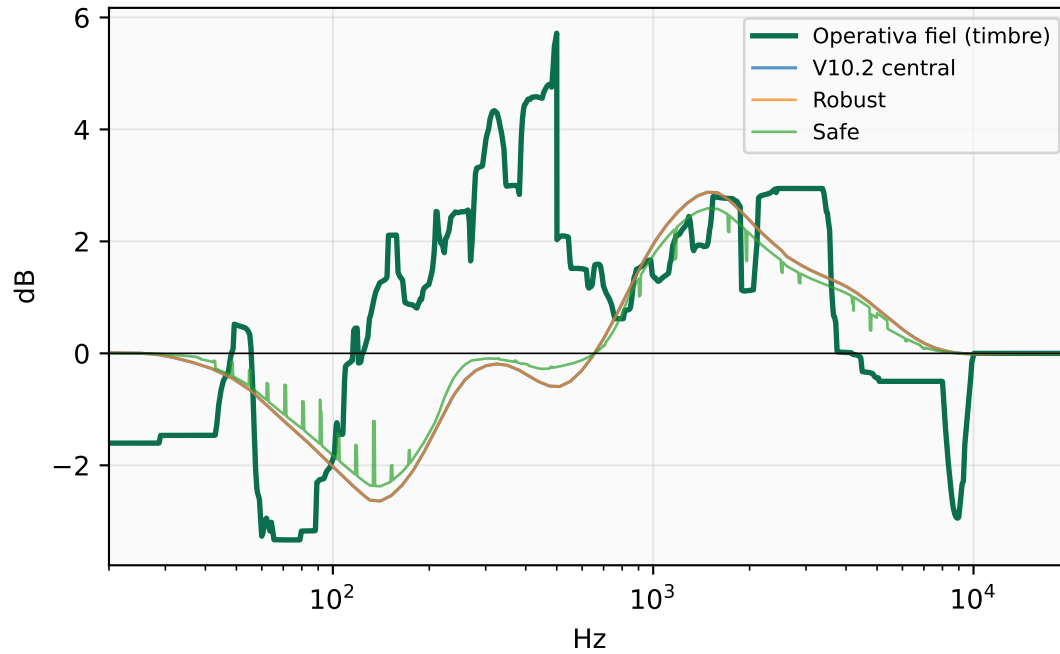

- 1) Transferencia Café → Azul (curva fiel + gain)
- 2) Respuestas RC Bajo / Híbrido / Guitarra
- 2b) Mezcla Azul(+gain)+RC = target compuesto
- 3) Tres presets Mooer GE300 de mínimo error sobre esa mezcla

Constraints GE300 (hard):

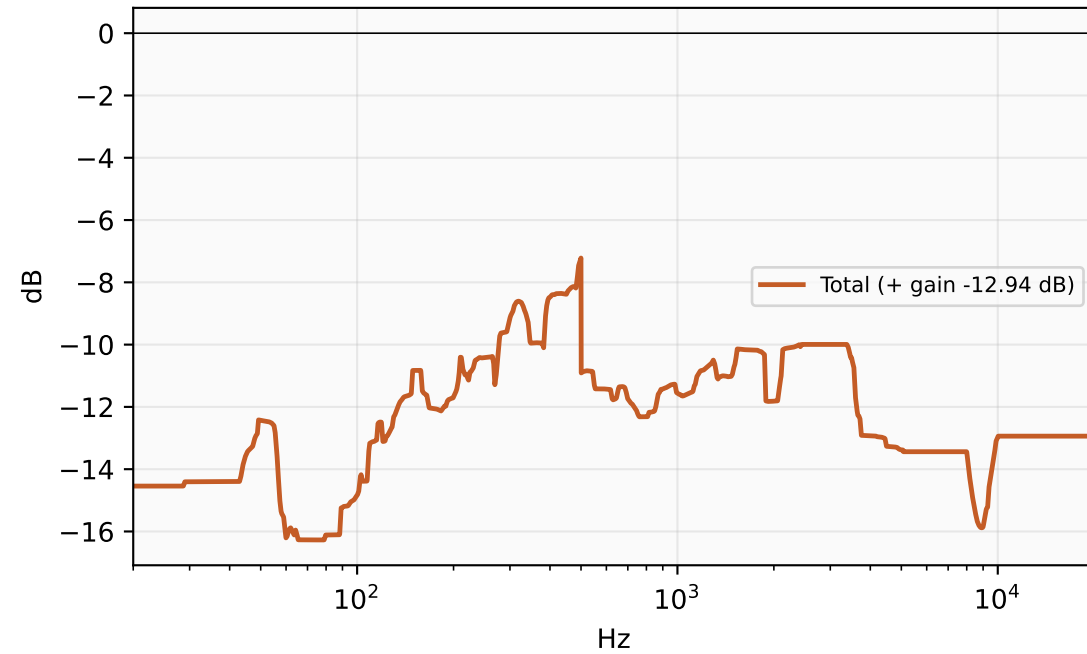

- Frecuencias locked: 30, 148, 735, 3637, 18000 Hz
- Q display locked: 0.3
- $Q_{\text{eff}} = 0.3 \times (0.569 - 0.0026 \times \text{gain\_display})$
- Global gain locked: +3 dB
